

Product Requirements Document (PRD)

Project Title: Gilead Medical Unit App

Client: Living Faith Church, Canaanland, Ota (Medical Unit - The Gilead)

1. Executive Summary

The Gilead Medical Unit app is a digital solution designed to streamline patient admission, consultation, treatment, and discharge processes for both emergency and cold cases during service hours. The goal is to improve efficiency, enhance patient care, and support seamless coordination among medical staff.

2. Stakeholders

- Medical Team Lead (Doctor)
- Nursing Staff
- Laboratory Scientist
- Pharmacist
- Protocol Officers
- Church Leadership / Admin

3. Problem Statement

Currently, the patient handling process at the Gilead Medical Unit is manual and fragmented. There's no centralized system to track patient flow, record vitals, or support treatment workflows. This creates delays and data loss during high-volume periods such as Sunday services.

4. User Personas

1. Protocol Officer: Handles registration, patient guidance, and discharge

confirmation. 2. Doctor: Conducts diagnosis and prescribes treatment/tests.

3. Nurse: Performs vital signs recording (especially BP).

4. Lab Scientist: Receives lab orders and enters test results.

5. Pharmacist: Dispenses drugs, confirms prescriptions.

6. Admin: Monitors system usage, manages users, generates reports.

5. Functional Requirements

A. Emergency Admission

- Quick emergency registration form
- Broadcast alert to Doctor, Nurse, Lab
- Record initial vitals (if possible)
- Contact tracing info entry by protocol

B. Cold Case Workflow

- Registration interface (Protocol Desk)
- Age-based vitals trigger (BP for >40yrs)
- Queue number assignment
- Doctor consultation module:
 - Diagnosis entry
 - Referral selection (Lab / Pharmacy / Dressing)
- Pharmacy module:
 - Prescription entry
 - Dispensation confirmation
- Protocol handoff:
 - Drug verification
 - Patient education
- Register entry

C. Laboratory Module

- Receive test orders
- Record test completion and results

D. Reporting & Admin

- Attendance report (daily summary)
- Drug usage report
- Case-type distribution
- User management

6. Non-Functional

Requirements - Role-based
access

- Offline data entry with sync
- Simple mobile-first UI
- Secure encrypted data

storage - Audit logging for every
action

7. Success Metrics

- 90% reduction in patient processing time
 - 100% record entry for patients seen -
- Seamless handoffs between staff - Clear
visibility of patient treatment path

8. Assumptions & Dependencies

- Protocol team has Android devices or tablets
- Reliable power supply during services
- Internet available but not required at all times

9. Open Questions

- Should patient history be visible across services/days? - Will lab results be printed or only viewed on app?
- Should referrals to external hospitals be logged?
